

realTime

Powerfully simple Actionable intelligence

We understand how busy growers are, that's why we've developed CropLogic™ realTime, a powerful tool to help you make cost-saving decisions at the click of a button

RESILIENT & ROBUST

Our easy-to-install sensor probes have proven durability across a variety of crop and soil types

30+ YEARS OF RESEARCH

Powerful and proven tool developed by leading agronomists leveraging over 30 years of research

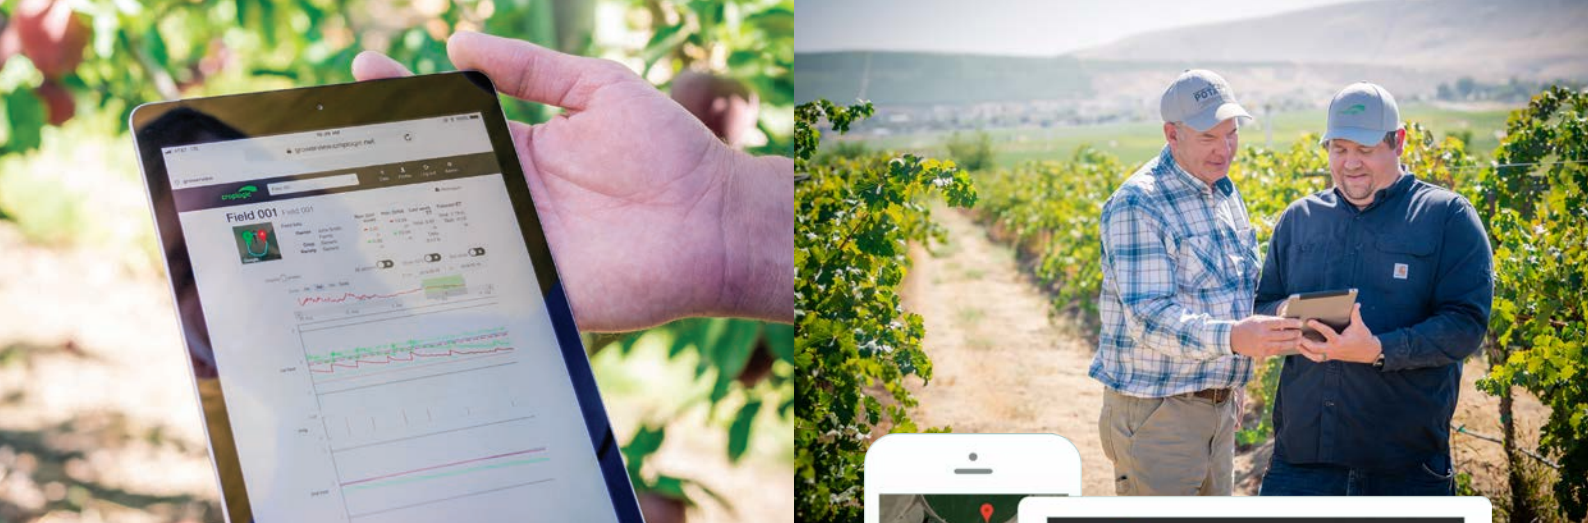

MONITOR, TRACK & MANAGE

Access your soil moisture data all in the one place, and on-the-go, with the simple-to-use app and desktop dashboard

24/7 DATA COLLECTION

Reliable and continuous satellite communications using cloud-based technology

CropLogic™ realTime

A hardware & software solution allowing you to combine your on-the-ground know-how with actionable in-field intelligence designed to help you optimise your crops' performance

- ✔ Performance-enhancing irrigation and agronomic decisions at the click of a button
- ✔ Better predict the behaviour of your crops' soil moisture levels
- ✔ Accurate and concise insights presented in a digestible format
- ✔ Actionable information helps you and your team effectively coordinate farm activities
- ✔ Monitor, track and access soil moisture data with simple-to-use app and dashboard
- ✔ Easy-to-install reliable and robust sensors suitable across all soil and crop types

A proven tool, tried and tested with real farmers across a variety of crops including fruit and nut trees, viticulture, vegetables and fodder crops

CropLogic™ realTime GrowerView Desktop Dashboard

Monitor, track and manage your soil moisture, irrigation, rain events and evapotranspiration rate all in the one place - as they happen. The easy-to-navigate dashboard enables you to access accurate and concise insights in an easily digestible format - designed to help you make cost-saving decisions throughout the critical season periods.

CropLogic™ realTime GrowerView App for Android and iOS

Access your soil moisture data on-the-go in real time. Prioritise the fields that need most attention with the adjustable soil-moisture threshold function, allowing you to plan your day and allocate your resources effectively.
