

realTime

ProAg
croplagic

Powerfully simple Actionable information

We understand how busy farmers are, that's why we've developed CropLogic™ realTime, a powerful tool to help you make cost-saving decisions at the click of a button

MONITOR, TRACK & MANAGE

Access your soil moisture data all in one place, and on-the-go, with the desktop dashboard and simple-to-use app

30+ YEARS OF RESEARCH

Powerful and proven tool developed by leading agronomists leveraging over 30 years of research

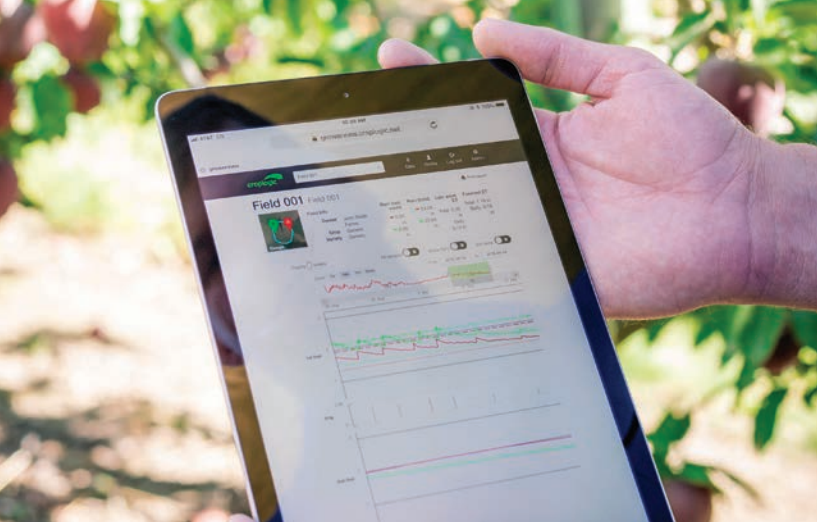

24/7 DATA COLLECTION

Reliable and continuous satellite communications using cloud-based technology

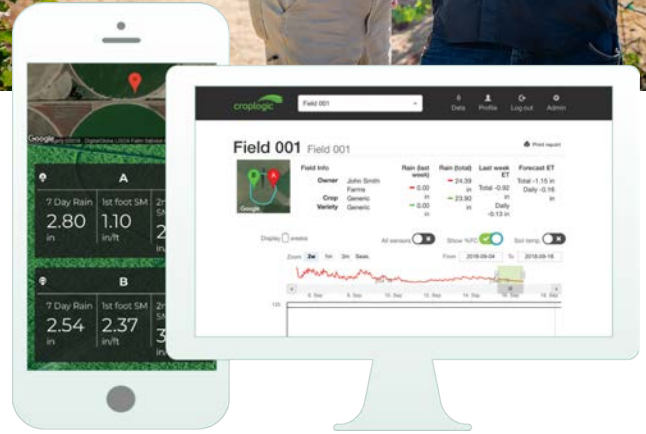

TRUSTED LOCAL EXPERIENCE

Our agronomists have over 100 years combined experience working locally with farmers to help optimize crop performance

CropLogic™ realTime

A hardware & software solution allowing you to combine your on-the-ground know-how with actionable in-field information designed to help you optimise your crops' performance

- ✔ Performance-enhancing irrigation and agronomic decisions at the click of a button
- ✔ Better predict the behavior of your crops' soil moisture levels
- ✔ Accurate and concise insights presented in an intuitive format
- ✔ Actionable information helps you and your team effectively coordinate farm activities
- ✔ Easy-to-install reliable and robust sensors suitable across all soil and crop types
- ✔ After-sale hands-on irrigation management services provided by local and experienced agronomists

A proven tool, tried and tested with real farmers across a variety of crops including row crops, viticulture and orchard

CropLogic™ realTime GrowerView Desktop Dashboard & Android/iOS App

Monitor, track and manage your soil moisture, irrigation, rain events and evapotranspiration rate all in the one place - as they happen. The easy-to-navigate dashboard enables you to access accurate and concise insights in an easily digestible format - designed to help you make cost-saving decisions throughout the critical season periods.

CropLogic™ Aerial Imagery You Crops' Doctor

We also offer Aerial Imagery services. Our high-resolution digital infrared, vegetative index and normal color imagery gives you a bird's-eye view of soil and crop variations. A proven tool to help facilitate early detection of problem areas, our Aerial Imagery service helps you better manage your crops' health.
